BUILDING LANDMARKS OF TOMORROW

Dhono Dhanyo Auditorium, Kolkata

Inspired by a conch shell, it is a testament to exemplary architectural design. Its structure is reinforced by 1,200 tonnes of Tata Structura steel used in the columns, trusses and purlins.

Trichy International Airport

Tata Steel Colors supplied advanced roofing profiles for the new terminal at Trichy International Airport, India.

Atal Setu, Mumbai

Proud to have played a part in building India's longest sea bridge, the Atal Setu, with over 42,600 tonnes of Tata Tiscon Fe500D, Tiscon ReadyBuild solution and our structural plates.

Sudarshan Setu, Gujarat

India's longest cable-stayed bridge, the Sudarshan Setu, has used 920 tonnes of Tata Tiscon Fe500D and 1,000 tonnes of Tata Wiron LRPC strands.

Coastal Road, Mumbai

Contributed 1,313 tonnes of Tata Wiron LRPC strands for specialised construction requirements of the Mumbai Coastal Road.

INTRODUCING OUR CAPITALS

Optimising *value*

Guided by its strategic objectives, Tata Steel deploys its six capitals to generate enduring value, driving both sustainable development and inclusive prosperity.

Tata Steel strategically invests its financial capital, powering growth, championing sustainability, and ensuring robust business continuity, all to deliver enduring value for its stakeholders.

Tata Steel Jamshedpur

Illuminating

MANUFACTURING'S FUTURE

Not once, but three times, Tata Steel has been recognised as a global beacon of manufacturing excellence! In 2019, two of our crown jewels simultaneously earned the prestigious World Economic Forum Lighthouse status — the technologically advanced IJmuiden plant in the Netherlands and the dynamic Kalinganagar plant in India, both celebrated for their groundbreaking integration of Artificial Intelligence, Big Data, and Machine Learning. Then, in 2021, the iconic Jamshedpur plant — Asia's first integrated steelworks — joined this elite global club, completing a remarkable hat-trick of 4IR excellence.

Together, these three Lighthouses illuminate Tata Steel's steadfast commitment to digital transformation, operational efficiency, and sustainable steelmaking. From optimising raw material usage to pioneering digital models, our Lighthouse sites reflect the future of manufacturing.

One ambition for a *stronger* tomorrow

N Chandrasekaran, *Chairman*

Dear Stakeholders,

It is my privilege to present the Integrated Annual Report of Tata Steel Limited for FY2025-26, marking the 119th year of your Company's journey, a year defined by structural transformation and continued commitment to long-term value creation.

The year 2026 began with expectations of steady global growth, soft inflation and easier financial conditions. The year witnessed positive developments including the signing of the landmark India-EU trade agreement and the interim India-US trade deal. However, by early March, the start of the West Asia crisis brought rising concerns about stagflation—falling output coupled with rising inflation.

In FY2025-26 the Indian economy remained a growth leader, with 7.6% growth driven by robust domestic demand and broad-based manufacturing strength. India's macroeconomic fundamentals remain resilient even though we face near term challenges due to the West Asia crisis. The medium and long term outlook presents a strong and compelling economic thesis of growth and resilience.

During the year, global steel industry remained subdued as production fell 2% to 1.85 billion tonnes in CY2025, driven by China's slowdown and weak Western demand. Volatile costs and regulatory pressures squeezed margins. While the Indian steel prices faced pressure for most of the financial year reflecting the weak pricing in the sea borne market, the Indian Steel industry displayed resilience and continued to grow in production at 10.7% to 168.4 million tonnes. The demand growth of steel was also strong at 7.6% to 163.7 million tonnes fuelled by sustained demand across infrastructure, construction, automotive, and industrial sectors, highlighting India's resilience.

For the FY2025-26, your Company delivered a consistent and robust financial performance with all-round improvement across all areas. The performance this year is a testament to the structural strength of our domestic operations and actions taken in our European portfolio.

Our consolidated revenue stood at ₹2,32,140 crore, registering a growth of 6% over the previous year which had revenues of ₹2,18,543 crore. This growth was underpinned by our highest-ever annual crude steel production of ~23.4 million tonnes and deliveries of ~22.5 million tonnes in India.

The consolidated EBITDA was ₹34,848 crore, a 35% increase y-o-y. The operational performance translated into a consolidated Profit After Tax (PAT) of ₹10,886 crore for the full year, representing a 243% increase compared to the ₹3,174 crore recorded in FY2024-25. In Europe, our strategy of structural intervention is yielding results. In the Netherlands, EBITDA tripled to €267 million, while in the UK, we have halved our EBITDA losses.

Our India revenues were ₹1,40,302 crore and EBITDA was ₹34,272 crore (a 17% increase y-o-y). We achieved a 24% EBITDA margin in the India business on the foundation of a transformative cost take out programme, improved product mix and increased volumes.

Your Company has also maintained a disciplined balance sheet, reducing the consolidated net debt to ₹80,144 crore, bringing Net Debt to EBITDA ratio to a healthy 2.3x.

In recognition of our robust performance and your continued trust, the Board has recommended a dividend of ₹4 per equity share.

The inauguration of the Phase II expansion at Kalinganagar is a landmark event with a ₹27,000 crore investment that has increased our domestic capacity to 26.1 MTPA, scaling the site capacity from 3 to 8 MTPA. With India's largest blast furnace and a state-of-the-art Cold Rolling Mill, the Phase II expansion has pivoted our flat products strategy towards high-value sectors like automotive and defence, marking a decisive step toward our 40 MTPA long term ambition.

Our leadership in India will be further strengthened in the future by the planned capacity expansion of Neelachal Ispat Nigam Limited.

Our focus on value-added segments and digital engagement is yielding record results with key segments achieving peak volumes during the year, bolstered by high-end products and expansion into defence and shipbuilding. We are also expanding our downstream capabilities in Tubes, Tinplate, and Wires, ensuring we capture higher value across the steel lifecycle.

During the year, your Company undertook a few strategic investments including consolidation of its ownership in Tata Steel Colors from its joint venture partner and acquisition of majority shares in Thriveni Pellets. These are critical interventions for the long term future of your Company.

Our leadership in India will be further strengthened in the future by the planned capacity expansion of Neelachal Ispat Nigam Limited (NINL), which apart from the recently inaugurated Electric Arc Furnace in Ludhiana will strengthen the Company's long products portfolio. The Board has also, during the year, approved the amalgamation of NINL into Tata Steel.

In Europe, your Company has been working on several levers to improve operating performance including cost take out programmes, focused management of cash flows and improvement of the environment management footprint in the operating sites.

During the year, TSUK officially broke ground on the £1.25 billion EAF Project at Port Talbot, marking the commencement of the UK's largest low-carbon steelmaking transition, in partnership with the UK Government. The project is progressing in terms of Engineering Design and Construction.

In the Netherlands, certain environmental regulations now exceed European Union Standards while emission metrics have tightened to levels where no feasible solutions are available for some of Tata Steel Nederland's (TSN) legacy assets within a regulatorily accepted time frame. Your Company is engaged with the Government of the Netherlands and all stakeholders to develop a future pathway for TSN that is environmentally compliant, financially affordable and viable in the future. Your Company also completed the acquisition of Vattenfall co-generation power plants in the Netherlands.

Tata Steel Colors – offering premium coated steel and roofing solutions

Groundbreaking ceremony of new Electric Arc Furnace at Port Talbot, UK

Technology and digital transformation are no longer ancillary initiatives at Tata Steel; they are core to our operational DNA and our ability to drive efficiency. We are shaping Tata Steel into a digital-first industrial enterprise. This year, our digital platforms, Aashiyana and DigECA, achieved a combined Gross Merchandise Value of ₹9,360 crore, a 161% increase y-o-y.

With the expansion of the footprint in India, we have to prioritise safety and be firmly committed to zero-harm across locations. We are strengthening our processes, deploying technology, and deepening awareness to ensure highest standards of safety. We also remain committed to inclusive growth, improving quality of life, and creating lasting societal value. Our CSR expenditure was ₹473 crore, and the activities positively impacted over 6.9 million lives in India during the year.

As we look ahead, the macro-environment remains unpredictable. Trade barriers, energy transitions, and shifting demand patterns will continue to challenge the industry. But Tata Steel is positioned not just to endure, but to lead. We have the assets, the technology, and most importantly, the people to transmute these challenges into enduring value.

We are building the Tata Steel of tomorrow, a company that is larger, greener, smarter, and more resilient.

On behalf of the Board, I would like to thank the employees, customers, suppliers and shareholders, for your unwavering confidence in our journey.

Warm regards,
N Chandrasekaran
Chairman

Building a *future together*

Koushik Chatterjee, *Executive Director & Chief Financial Officer*

T V Narendran, *Chief Executive Officer & Managing Director*

Q. How would you assess Tata Steel's overall performance during FY2025-26?

FY2025-26 was characterised by global pricing pressures through the first three quarters on the back of continuing record export levels out of China. This was coupled with disruptions in export markets for our European businesses due to US tariffs. Interventions to address excessive imports in India, Europe and the UK restored balance to the markets in the second half of the year, but the West Asia conflict in Q4 has increased uncertainty in terms of input costs and supply chain disruptions.

Despite external headwinds, our sustained focus on operational discipline and cost transformation helped us deliver a robust performance. With consolidated revenue reaching ₹2,32,140 crore, our consolidated EBITDA rose 35% y-o-y to ₹34,848 crore, representing a healthy 15% margin, a 320-bps improvement over the previous year. India operations were particularly strong, delivering an EBITDA of ₹34,272 crore, which translates to an EBITDA margin of 24%. This was on the back of a record production of 23.4 million tonnes and 'best-ever' deliveries of 22.5 million tonnes (an 8% increase y-o-y). In the Netherlands, EBITDA tripled to €267 million, while UK EBITDA losses nearly halved to £217 million. The cost transformation programme delivered about ₹10,868 crore of savings across geographies.

Our liquidity remains robust at ₹45,237 crore, providing a significant cushion against potential macroeconomic or geopolitical shocks. Operating cash flows improved by 52% to ₹35,064 crore, aided by a working capital release of ₹5,442 crore. This demonstrated resilience positions us well for our next phase of value creation and sustainable growth, even amidst temporary disruptions and structural shifts in global steel.

Reflecting our commitment to creating long-term value, the Board has recommended a dividend of ₹4.0 per equity share. This payout, consistent with our 85+ year history of uninterrupted dividends, rewards our shareholders while our resilient financial position also enables us to finance our capital-intensive investments in value-added downstream products and growth in our core markets.

Q. What is the status of your Capex plans and long-term growth strategy?

In FY2025-26, we spent ₹14,559 crore on capital expenditure, and we plan to increase this to approximately ₹20,000 crore in FY2026-27, with 60% allocated to India. A major milestone was the commissioning of the 5 MTPA blast furnace at Tata Steel Kalinganagar, scaling this premier global steelmaking complex to 8 MTPA. We also inaugurated the 0.75 MTPA scrap-based EAF at Ludhiana, the first of a planned series of modular, agile, green and circular steelmaking units.

We have already commenced early site development work for the 4.8 MTPA Phase 1 expansion at NINL. Regulatory approvals are progressing steadily, and basic engineering, critical for a final capital allocation decision, is advancing well.

Our capital allocation strategy for FY2026-27 focuses on a balanced mix of sustenance projects, ongoing investments in value-added downstream and infrastructure projects, new technologies, and long-term growth projects, with a clear emphasis on India. This includes expansions in Tinplate and Wires, the HRPGL (Hot Rolled Pickling & Galvanising Line) facility at Tarapur, and the Coke Ovens project at Jamshedpur. In addition, we are continuing to invest in mining, a stronger supply chain and sustainability of operations.

Our long-term growth strategy remains anchored in expanding capacity, enhancing product mix, improving cost competitiveness, and building a more sustainable, technologically advanced manufacturing base to lead the Indian market.

Q. How is Tata Steel ensuring raw material security for its expanding capacity?

Tata Steel currently has 100% iron ore supply security for our India operations through our captive mines, which produced 44 million tonnes this year. Our captive coal mines met 25% of our requirements in India, with raw coal production at ~6 million tonnes in FY2025-26.

In FY2025-26, we acquired majority stake in Brahmani River Pellets Limited to strengthen control over raw material supply and slurry pipeline logistics. We will continue to invest through this business, in infrastructure that will enable more efficient supply to our capacity expansions in future.

Tata Steel has bid for and acquired certain iron ore mining leases that we are developing. We will continue to take a balanced and structured approach to additional opportunities as they arise as part of new mining leases which are auctioned. Our mining leases in Jharkhand and Odisha approach expiry by FY2030 under the amended Mines and Minerals (Development and Regulation) Act, 1957, which requires auction-based allocation. To manage raw material supply risks through a diversified approach, our goal is to source at least 50% of our iron ore from captive mines to ensure stable operations and reduce the impact of possible supply disruptions.

Q. How is Tata Steel managing its debt profile and deleveraging journey?

Deleveraging remains a core enterprise priority. In FY2025-26, we reduced our Net Debt to ₹80,144 crore, bringing our Net Debt to EBITDA ratio down to a healthy 2.3x from 3.3x two years ago. We proactively prepaid around ₹7,556 crore of debt using internal cash flows.

For the last few years, we have been focusing on the onshoring of overseas debt to mitigate the rupee depreciation risks. As a result, the overseas debt has come down from about 50% of the total debt in FY2020-21 to 18% of the total debt in FY2025-26. Without this proactive onshoring, our gross debt would have been higher by ₹12,500 crore due to rupee depreciation alone. Our goal is to repay the remaining bonds issued by our overseas subsidiaries by FY2027-28.

These measures have helped reinforce the basis of our investment-grade credit ratings from S&P and Moody's. Our balance sheet strength also ensures that we retain financial flexibility required to fund investments in growth, value-added upstream and downstream assets and new technologies and decarbonisation through the business cycle.

Q. What is the progress on the structural transformation of your European operations?

In the UK, we have exited legacy heavy-end steelmaking at Port Talbot and are transitioning to a state-of-the-art 3.2 MTPA EAF facility, supported by a £500 million UK

> **Deleveraging remains a core enterprise priority. In FY2025-26, we reduced our Net Debt to ₹80,144 crore.**

Government grant. This shift will reduce CO_2 emissions by 50 million tonnes over a decade. Major demolition work has been completed; fabrication and delivery of equipment are continuing at pace. National Grid has informed us of some potential delay versus the original planned date of the high voltage connection, but we are working closely with all stakeholders including the UK Government to mitigate the impact and develop revised schedules.

TSN had executed a non-binding Joint Letter of Intent with the Government of the Netherlands and the Province of North Holland in September 2025, based on plans for its integrated decarbonisation and environmental improvement project. At this time, we are continuing to work on various pre-conditions for the project with all stakeholders. This includes addressing the future of the coke and gas plants, and regulatory issues impacting the business including the future classification and treatment of slag. It also involves resolution of critical policy matters impacting the investment case, obtaining permits for the projects, and finalisation of the engineering, scheduling and business case for the project. Resolution of these matters is a pre-requisite for a final investment decision.

Our operating focus continues to be on reducing fixed costs and improving product mix to strengthen the profitability and sustainability of our European business.

Strengthening our long products portfolio

Q. How is Tata Steel Nederland managing recent regulatory developments and permit-related challenges at the IJmuiden site?

TSN continues to engage closely and constructively with local regulators and authorities to address the evolving regulatory landscape at IJmuiden. Based on measurements by the Environment Agency indicating exceedances of certain prescribed emission limits at the coke and gas plants, TSN has received multiple notices of alleged non-compliance and has incurred penalties exceeding €20 million in FY2025-26. In April 2026, the Environment Agency and the Province formally communicated their intention to revoke certain operating permits and accelerate the closure of the coke and gas plants.

In response, TSN has undertaken a detailed technical and operational assessment and shared a comprehensive plan with the authorities, outlining a safe, responsible, and controlled timeline for closure that takes into account operational, environmental, and safety considerations. TSN is also parallelly exploring all available avenues, including legal recourse, to ensure that any transition is managed with due care and prudence, balancing environmental compliance with workforce safety and business continuity. Environmental standards in the Netherlands are among the most stringent globally. In some instances, these standards are also evolving, and currently there are limited technically and operationally feasible methods to measure, monitor, and meet the prescribed thresholds, particularly given the design and vintage of our coke oven assets.

TSN is also engaging with regulators on evolving requirements for the classification and disposal of steel slag in the Netherlands, where local standards are becoming increasingly stringent, beyond requirements in the rest of the European Union,and pose additional operational challenges.

Overall, our approach remains anchored in transparent engagement, technical rigour, and a commitment to ensuring the transition is executed in a safe, compliant, and responsible manner, while safeguarding the long-term sustainability of the business.

Q. How has the turnaround of Neelachal Ispat Nigam Limited (NINL) progressed?

The turnaround of NINL has been a compelling success story. Since its acquisition, the plant has moved from being mothballed to operating at rated capacity for two years. In FY2025-26, NINL achieved a robust 23% EBITDA margin, contributing significantly to our India performance. Operationally, the plant hit record crude steel and sinter production levels, supported by sharp reductions in raw material consumption. We have also achieved full utilisation of process solid waste, reflecting our deep integration of sustainability. To further streamline governance and unlock synergies, the Board has approved the merger of NINL into Tata Steel, which is expected to be completed in FY2026-27. NINL now serves as a vital growth platform, and we have announced a 4.8 MTPA Phase-I expansion focused on long products. With a land bank capable of supporting 10 MTPA,
